PROPOSAL FROM THE AUSTRIAN AERO CLUB FOR A DEFINITION OF A COMMITEE TO TEST SCORING SOFTWARE
15 December 2006

It is proposed:

to define a Committee for the test of scoring software.
to use only approved scoring software on IGC sanctioned competitions.

Reasons for supporting the proposal:

- problems with scoring systems software where pointed out during the last meetings
- like we have with GFAC, we would need a committee for the test of scoring software
- we should only use approved scoring software on IGC sanctioned competitions
- if you use different software and different algorithms the output is different
- we need to make sure that the scoring system software is well proved like the flight recorders
