## **Report of Technical Adviser GNSS**

Our document: FAI Sporting Code Section 2 Annex 4\_2020\_V2.0 - **Requirements for Equipment used for Flight Validation** has been reviewed and the only modifications that might be necessary is to make the Pilot Event button - Optional. And remove the list of approved equipment to our website.

A new logger was submitted by Germany for evaluation:

The **Columbus P-10 Pro** and USB download is approved for scoring our, Rally, Precision and ANR competitions.

With the advent of Live Tracking we now need to investigate our requirements.

The **Flymaster Tracker 4G** and LiveTrack to download the logger is approved for scoring our, Rally, Precision and ANR competitions.

Additionally we have the following systems available to us, from:

Spanish

The Glider guys have an Open Glider Network project! They have developed a ADS-L transmitter. This could be useful for live tracking and scoring our competitions, but requires further investigation.

French

- FFA trackers. Their website was hacked and I await the recovery before I can investigate approval of this equipment.

Norwegian

- Air Sports Live Tracking. Still to be investigated and approved.

Italian

Name: Flight Recording Systems (FRS) The FRS was tested but download times need to be improved before we can approve these products.

Your Sincerely

Frank Eckard
